Professional Summary

Cybersecurity professional with hands-on experience in vulnerability assessment, risk analysis, and vulnerability management workflows using Qualys VMDR, Nessus, Nmap, Wireshark, and Metasploit, SEIM. Skilled in identifying, prioritizing, validating, and documenting vulnerabilities using CVSS scoring and remediation best practices. Strong understanding of networking, operating systems, security frameworks, and enterprise vulnerability management processes. Experienced in stakeholder communication, operational coordination, and delivering actionable insights through previous client-facing and operations management roles.

Technical Skills & Security Tools

Vulnerability Management: Qualys VMDR, Nessus Essentials, OpenVAS, CVE/CVSS Analysis, Risk Prioritization, Remediation Validation

Security Testing & Analysis: Nmap, Wireshark, Metasploit, Network Scanning, Service Enumeration, Exploit Validation

Networking & Systems: TCP/IP, DNS, HTTP/HTTPS, Windows, Linux, Active Directory Basics, Firewall Fundamentals

Security Frameworks & Concepts: OWASP Top 10, CVSS, CVE, Vulnerability Assessment, Patch Management, Security Hardening, Incident Response Basics

Soft Skills: Stakeholder Communication, Documentation, Cross-functional Collaboration, Risk Analysis

Vulnerability Management Experience

- Conducted authenticated and unauthenticated vulnerability assessments using Qualys VMDR and Nessus Essentials.
- Analyzed vulnerability scan results and prioritized remediation activities based on CVSS severity, exploitability, and potential business impact.
- Performed manual validation of vulnerabilities to reduce false positives and improve remediation accuracy.

- Documented assessment findings, remediation recommendations, and mitigation strategies aligned with vulnerability management workflows.
- Practiced vulnerability lifecycle activities including discovery, prioritization, remediation validation, and reporting.
- Utilized Nmap, Wireshark, and Metasploit to support vulnerability assessment and exploit validation activities.
- Collaborated in simulated environments to improve security posture through patching, configuration hardening, and exposure reduction.

Security Projects

Qualys VMDR

- Performed asset discovery, tagging, and vulnerability assessments using Qualys VMDR to simulate enterprise vulnerability management operations.
- Configured and executed vulnerability scans against systems and analyzed findings using CVSS scoring and risk-based prioritization methodologies.
- Identified critical and high-severity vulnerabilities and provided remediation recommendations including patching, configuration hardening, and service exposure reduction.

Tenable Nessus

- Conducted vulnerability assessments using Nessus Essentials against vulnerable targets including Metasploitable systems.
- Configured scan policies and performed authenticated and unauthenticated scans to identify outdated software, exposed services, and security misconfigurations.
- Analyzed vulnerability reports using CVSS severity ratings and prioritized remediation efforts based on exploitability and potential impact.
- Generated vulnerability assessment reports summarizing findings, risk levels, and recommended remediation actions.

Nmap, Wireshark & Metasploit

- Performed host discovery, service enumeration, packet analysis, and exploit validation within controlled environments.
- Investigated insecure protocols, plaintext credential exposure, and vulnerable services to understand enterprise security risks.
- Assisted in identifying vulnerable services during simulated incident response and post-remediation validation exercises.

Certifications

- CompTIA Security+
- ISC2 Certified in Cybersecurity (CC)
- Qualys VMDR Module

Professional Experience

Conin technologies private limited | Junior Analyst(SOC+VM) | May 2025 – Present

- Monitored and analyzed security alerts and incidents using SIEM tools, performing initial triage and escalating critical threats to senior security teams for remediation.
- Conducted vulnerability assessments using tools such as Qualys VMDR and Tenable Nessus to identify security weaknesses across Windows and Linux environments.
- Managed incident and vulnerability remediation workflows through ServiceNow by creating, tracking, updating, and closing security tickets within defined SLAs.
- Performed vulnerability validation and re-scanning activities after patch deployment to ensure successful remediation of critical and high-risk CVEs.
- Investigated suspicious network and endpoint activities by reviewing logs, analyzing indicators of compromise (IOCs), and supporting incident response operations.
- Coordinated with infrastructure, server, and application teams to prioritize vulnerabilities based on CVSS scores, exploitability, asset criticality, and business impact.
- Prepared daily and weekly security reports including vulnerability status, remediation tracking, incident summaries, and compliance metrics for internal stakeholders and management review.

Vrinda Bizza | Co-founder & Operations Manager | Apr 2023 – Apr 2025

- Co-founded and managed restaurant operations including process optimization, vendor coordination, staffing, and workflow management.
- Led cross-functional coordination, operational planning, and problem-solving in a fast-paced environment.
- Developed strong stakeholder communication, documentation, and operational efficiency skills transferable to cybersecurity operations roles.

Blueline Digital | Founder & Marketing Manager | Sept 2021 – Apr 2023

- Managed multiple client projects simultaneously while maintaining operational quality and deadlines.
- Analyzed large datasets and campaign performance metrics to generate actionable recommendations.
- Coordinated with technical, creative, and business teams to ensure project alignment and delivery.

Way2Online | Account Manager – Ad Operations | Sept 2018 – Sept 2021

- Managed campaign operations and reporting for 80+ brands monthly.
- Prepared performance reports and communicated optimization recommendations to stakeholders.

- Collaborated with technical and business teams to improve operational workflows and campaign efficiency.

Education

PGDM – Marketing & Machine Learning | Vishwa Vishwani Institute of Systems and Management

Bachelor of Technology – Computer Science & Engineering | Mallareddy College of Engineering & Technology
